DETAILED OFFICE ACTION

Faxing of Responses to Office Actions

In order to reduce pendency and avoid potential delays, TC 3700 is encouraging FAXing or responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers, which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into TC 3700 will be promptly forwarded to the examiner.

1. Claims 46 and 49 have been amended for further examination. Claims 1-2, 6, 7, 10-45, 47, 48 and 55-60 have been canceled. Claim 61 has been added.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/267,420

Art Unit: 3722

2. Claims 3-5, 8, 9, and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taylor et al (WO 98/15418) in view of Drinkwater et al (WO-9427254).

Taylor et al disclose in Fig. 1-4, a self-authenticating article comprising: a plastic paper substitute (2) which can be in the form of a banknote or travelers checks, or the like having indicia (4) printed on the plastic paper substitute; authenticating means is a decoding lens for revealing encoded hidden indicia (Page 15, lines 7-19) wherein the authenticating area (5) is positionable in juxtaposed relation to the hidden indicia thereby providing instant verification of the authenticity of the article (page 15, lines 17-19) and wherein the decoding lens can be an inlaid preformed lenticular lens (Page 4, line 16).

However, Taylor et al does not disclose wherein lens has a lens frequency corresponding to the predetermined line frequency of the encoded hidden image, wherein the lens is positioned to overlie the printable surface so that encoded, hidden indicia may be viewed; and wherein the plastic paper substitute is selected from the group consisting of synthetic resin films having a high degree of writability and printability, laminate composite structures including combinations of paper and non-paper materials, latex saturated durable papers, coated polyolefin substrates formed from randomly dispersed and bonded polyolefin filaments, reinforced papers, and combinations thereof.

Drinkwater et al discloses in Fig. 1A-1E, wherein a lenticular lens (3, as stated on Page 7, lines 24-33) has preformed lenticules arrays (Page 22, lines 22-28) which are registered in the same relationship (pitch or frequency) of the scrambled image (2, as stated in Page 7, lines 5-9),

Application/Control Number: 09/267,420 Page 4

Art Unit: 3722

wherein the image can be reconstructed, or decoded (Page 22, lines 30-36, Page 6, lines 34-37, and page 7, lines 1-9).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Taylor et al's article with a lenticular lens having a frequency corresponding with the images frequency to decode the image as taught by Drinkwater et al as an alternative means of authenticating an article and decoding indicia.

In regards to **Claim 46**, wherein the hidden image is formed from a plurality of lines printed with a line frequency that is multiple of the lens frequency; and wherein the lenticular lens is produced by an intaglio engraving process, the patentability of a product does not depend on its method of production. If the product in the product-by process claims is the same or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. Therefore, the lens and hidden images can be produced or formed by any desired process.

In regards to Claim 8, it would have been obvious to one having ordinary skill in the art at the time the invention was made to construct the article in any desired material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. Therefore, it would have been obvious to construct the plastic paper substitute with any desired components, since applicant has not disclosed the criticality of using particular material components, and invention would function equally as well with any component material.

Application/Control Number: 09/267,420 Page 5

Art Unit: 3722

Allowable Subject Matter

3. Claims 49-54 and 61 are allowed.

Response to Arguments

4. Applicant's arguments filed on November 23, 2005 have been fully considered but they are not persuasive.

In regards to applicant's argument that the prior does not disclose "at least a portion of the encoded, hidden indicia being decoadable only through the use of a decoder having a decoding frequency corresponding to the predetermined line frequency", the examiner submits that Drinkwater is used to disclose a lenticular lens decoder in register having decoding frequency (pitch) that correspond to the predetermined hidden indicied image on a substrate in order to decode the image, wherein there is magnification by the decoding lens. It appears that applicant's added limitation in Claim 46 is a broad redundant limitation to that which is already disclosed in lines 7-12.

Application/Control Number: 09/267,420

Art Unit: 3722

Prior Art References

The prior art references listed in the attached PTO-892, but not used in a rejection of the claims, are cited for (their/its) structure. Alasia et al discloses a similar authenticating article.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark T. Henderson whose telephone number is (571) 272-4477, and informal fax number is (571) 273-4477. The examiner can be reached on Monday-Friday from 9:00AM to 3:45PM. If attempts to reach the examiner by telephone are unsuccessful, the Examiner Supervisor, Boyer Ashley, can be reached at (571) 272-4502. The <u>formal</u> fax number for TC 3700 is (571) 273-8300.
